2 Introduction

SimpleProg is specially designed for iPhone, iPod touch and iPad to maintain personal/business information as Lists in the form of table. This user guide gives you a quick introduction about how to use SimpleProg on iOS devices.

3 SimpleProg

SimpleProg is a super simple Personal and Business information manager to store any kind of text information in the form of Lists.

You name the type of information you want to store; say Notes, To Do, Passwords, Appointments, Stocks or any other information and in no time you can have them in SimpleProg with few easy simple steps.

If you are tired of maintaining different kind of information in different applications and looking for a one stop application that can handle all of your Personal/Business information then SimpleProg is a perfect simple companion tool for you.

Reminders can be added to any Lists and get notified daily, weekly, monthly or yearly.

SimpleProg allows you to export the List as CSV, Excel and PDF and also print them using Air Print.

SimpleProg supports drawing Pie, Bar & Line charts based on the information stored in the List. You can export the charts as images and print them using Air Print.

If you are having more than one apple device and want to have the information to be in sync across devices then SimpleProg does that using Apple iCloud.

3.1 Features

- Store any kind of text information in the form of Lists.
- Create Lists from rich set of existing pre-defined Templates.
- Create your own Templates by defining columns for the List.
- Add Reminders to any kind of List.
- Export and save Lists as CSV, Excel and PDF format.
- Support for multiple Profiles / Databases.
- Plot Pie/Bar/Line charts with the information in the List.
- Export and save charts as image.
- Import data from CSV files.
- Sync across devices by enabling Apple iCloud.
- Encrypt and protect the Lists using password.
- Print Charts and Lists using Air Print.
- File Browser/Viewer for Local and iCloud documents folder.
- Apply theme using rich set of custom defined colors.
- Backup and Restore the Lists easily.

3.2 Pre-Defined Templates

SimpleProg comes with set of pre-defined templates. You can create Lists using one of these Templates or use one of the Templates created by you.

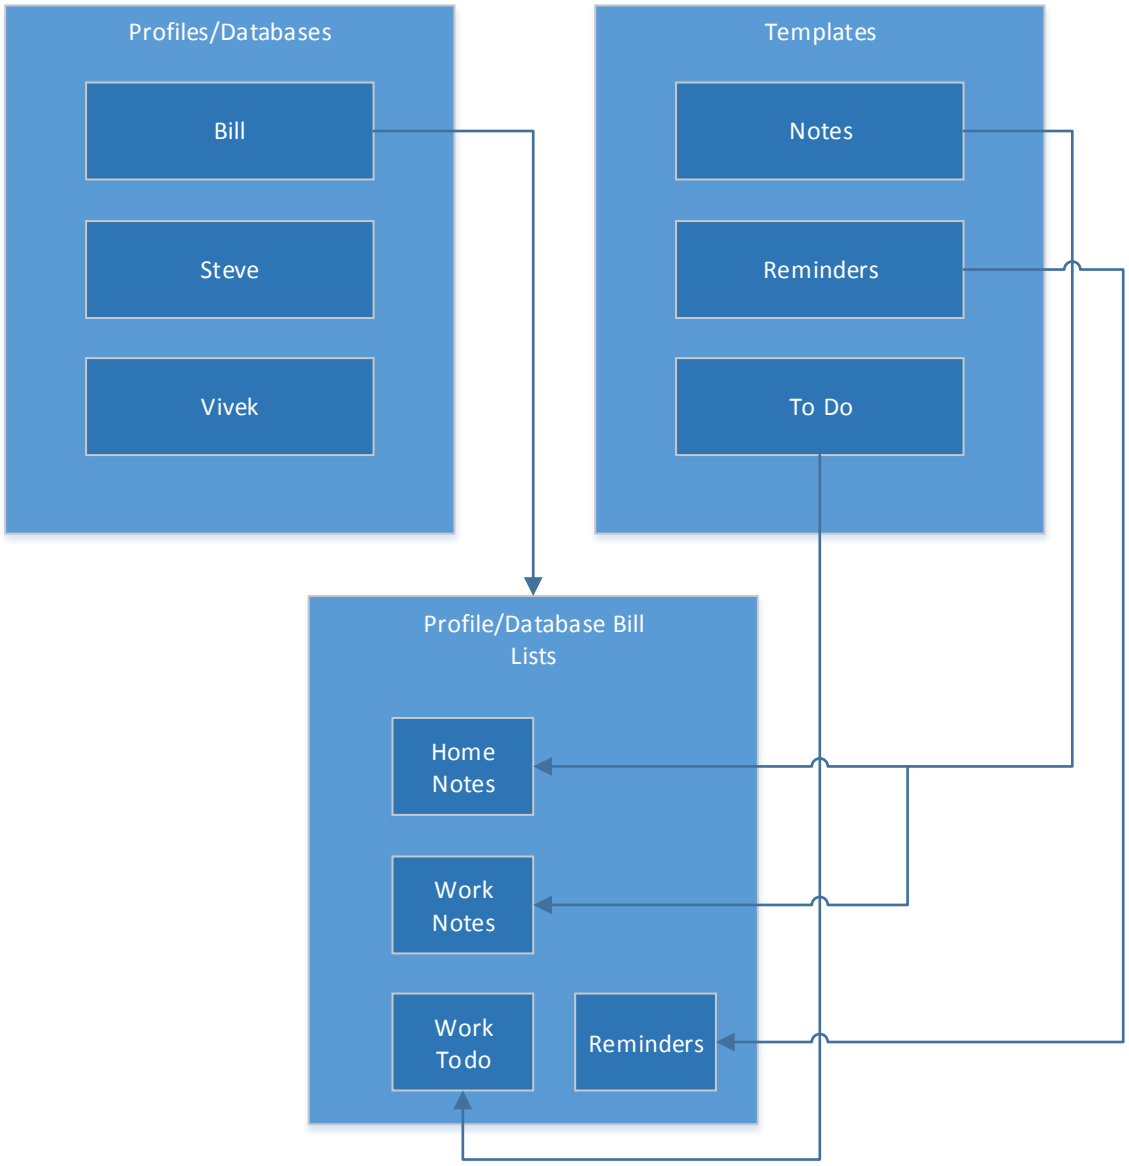
These are the list of pre-defined templates.

Pre-Defined Templates
Notes
To do
Passwords
Birthdays
Personal Finance
Stock Portfolio
Blood Glucose
Blood Pressure
Appointments
Websites
Reminders

4 Design

4.1 Architecture

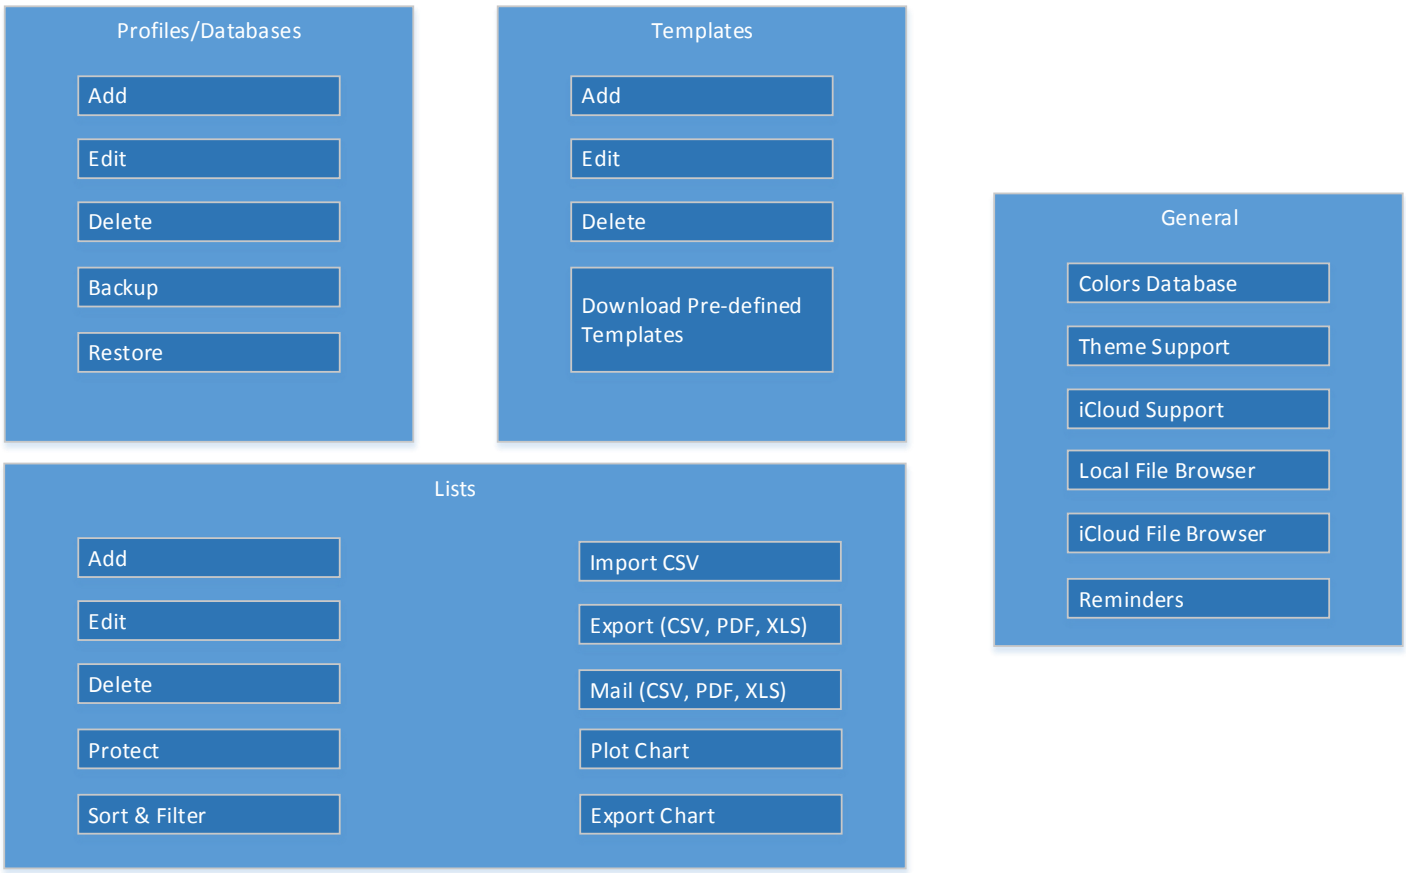
The following diagram shows the basic architecture of SimpleProg. It is designed to be very simple to use in iOS devices.



1. In SimpleProg you can maintain information in List as tables.
2. The Lists are created by using pre-defined Templates or the Templates created by you.
3. The Lists are contained in Database/Profile.

4.2 What you can do?

The following diagram explains you about what you can do with SimpleProg.



4.3 Toolbar

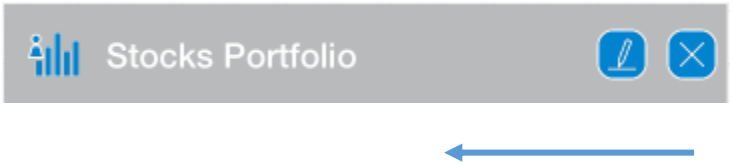
The following table shows you the buttons that are used in toolbars of SimpleProg.

Button		Button	
	Go to Home screen		Information
	Add Record		Chart
	Edit Record		Options
	Delete Record		Save
	Refresh screen		Mail
	Order Rows		Send to iCloud
	Filter Data		Help
	Sort Data		Video
	No. of Columns		Apply
	Search		Database
	Expand/Collapse		Navigate screen or Select
	Reveal		Hide
	Settings		

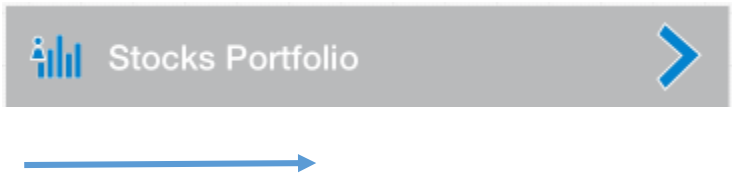
4.4 Gestures

This section explains you about the gestures used in SimpleProg.

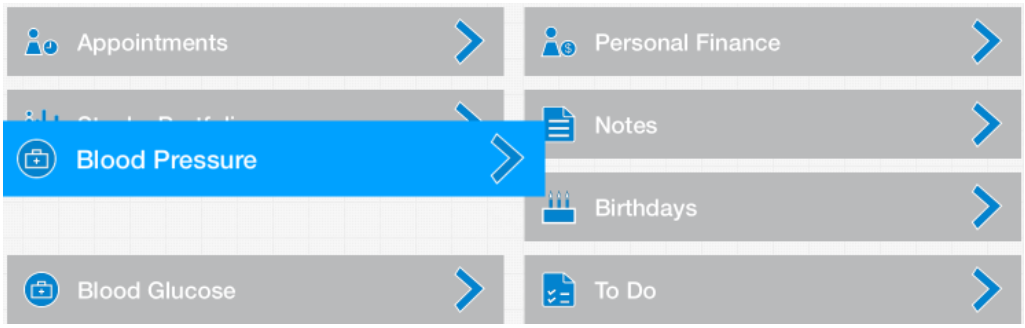
1. In the tiles screen, you can swipe left on the tiles to show edit and delete button.



2. Swiping right on the tiles will hide the edit and delete button.



3. Long pressing the tile will allow you to reorder the tiles.



4.5 General Tasks

Adding an Item

To add an Item you can do one of the following.

1. Touch the Add button + in the top navigation bar.

2. Touch the Add button + in the bottom toolbar.

Editing an Item

To edit an Item, highlight the item and you can do one of the following.

1. Touch the Edit button in the bottom toolbar.
2. Swipe left in the tile to display Edit button and touch the Edit button.
3. Where there is no child screen available, touching Arrow button > in the tile will also lead to edit.

Deleting an Item

To delete an Item, highlight the item and you can do one of the following.

1. Touch the Delete button × in the bottom toolbar.
2. Swipe left on the tile to display Delete button × and touch the Delete button ×.

Reorder an Item

To reorder an item, you can do any one of the following.

You can reorder an item by gestures as described in section *Gestures*.

1. Touch the Reorder button ↑↓ in the bottom toolbar to display a reordering screen.

Switch between Tiles and Table View

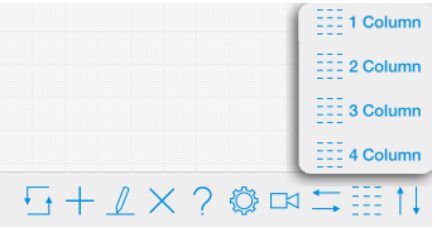
SimpleProg can display items in Tiles and Table View. To switch between Tiles and Table View, you can do the following.

1. Touch the Expand / Collapse button in the bottom toolbar.

Change the No. of Columns in Tiles View

SimpleProg can display 1 to 4 columns in Tiles View. You can change the No. of Columns to be displayed by doing the following.

1. Touch the Columns button in the bottom toolbar. It will display the following popup menu from which you can select one of the option.



Navigate to Next Screen

SimpleProg allows you to navigate to Next screen by doing the following.

1. Touch the Arrow button in the right side of the Tile in Tiles View.
2. Touch the Arrow button in the left side of the Row in Table View.

Highlight an item

To highlight an item, you can do the following.

1. In Tiles View, touch the Tile to highlight it.
2. In Table View, touch the Row to highlight it

Select an Item

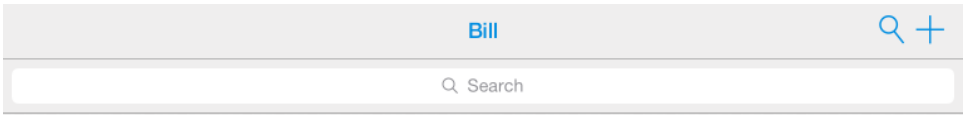
To select an item you can do the following.

1. Touch the Arrow button > in the right side of the Tile in Tiles View.
2. Touch the Arrow button > in the left side of the Row in Table View.

Searching

To Search items, you can do the following.

1. Touch the Search button in the top bar to display the Search box if it is hidden.

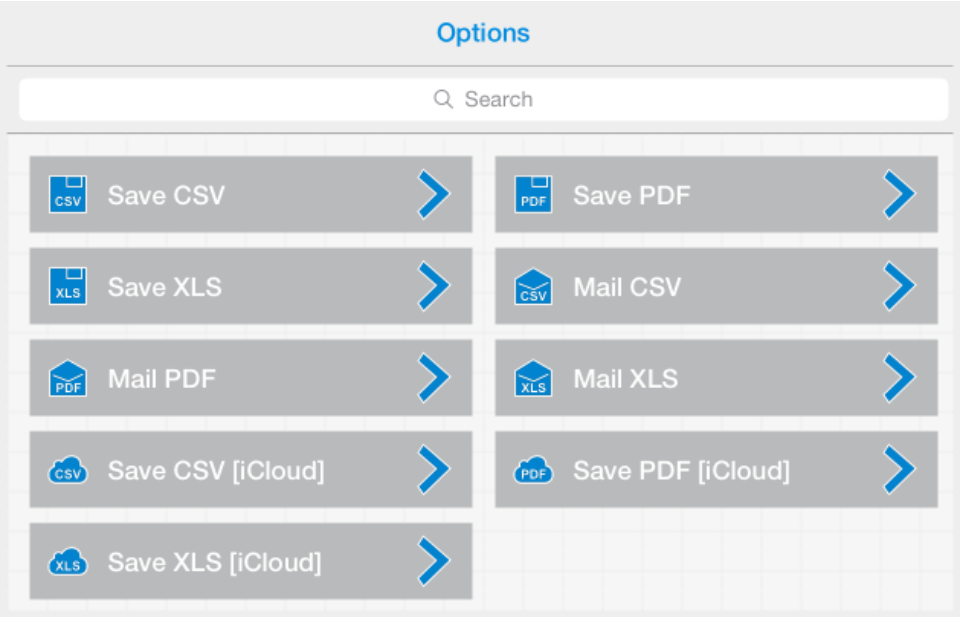


2. Type the text in the Search Bar to filter the items.

Export/Mail

SimpleProg allows you to export items as CSV, Excel and PDF file. It also allows you to email the same. You can activate the option by doing the following.

1. Touch the Options button in the bottom toolbar for possible options that will be displayed to you as follows.



Option	Description
Save CSV	Selecting this will save the items as CSV file.
Save PDF	Selecting this will save the items as PDF file.
Save XLS	Selecting this will save the items as Excel file.
Mail CSV	Selecting this will email the items as CSV file.
Mail PDF	Selecting this will email the items as PDF file.
Mail XLS	Selecting this will email the items as Excel file.
Save CSV [iCloud]	Selecting this will save the items as CSV file in iCloud.
Save PDF [iCloud]	Selecting this will save the items as PDF file in iCloud.
Save XLS [iCloud]	Selecting this will save the items as Excel file in iCloud.

5 Lists

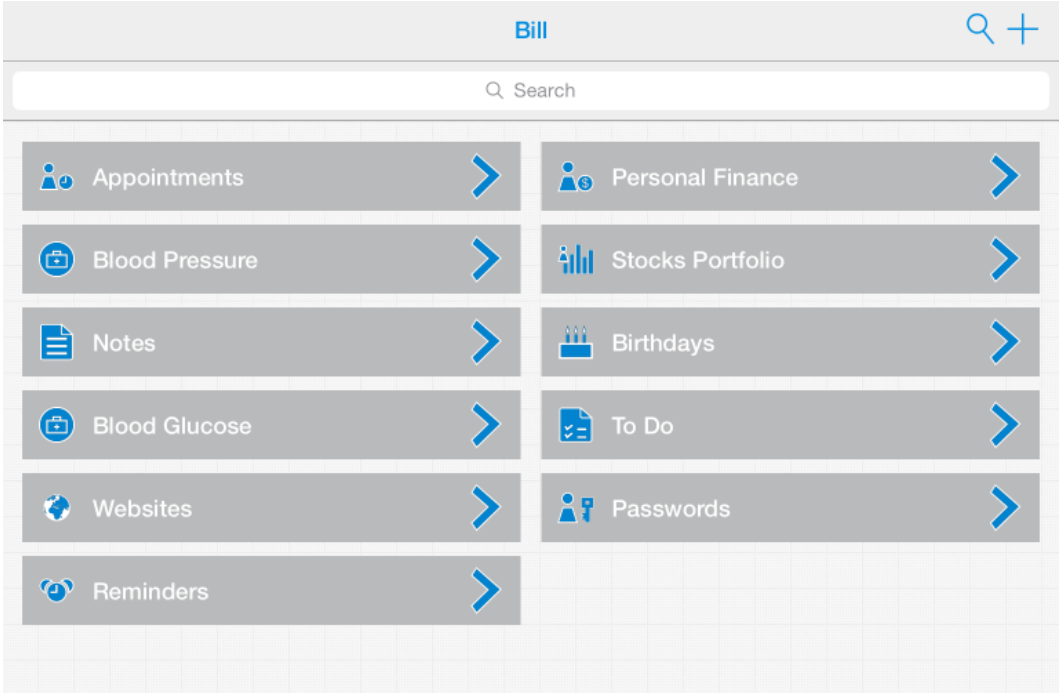
5.1 What are Lists?

Lists are made from pre-defined Templates available in SimpleProg or Templates defined by you. The List can be anything viz, Notes, To do, Stocks Portfolio, Reminders, Blood Pressure etc., You can define a Template of your choice and use the Template to create Lists. Refer to section *Templates* for more information on how to create and manage Templates.

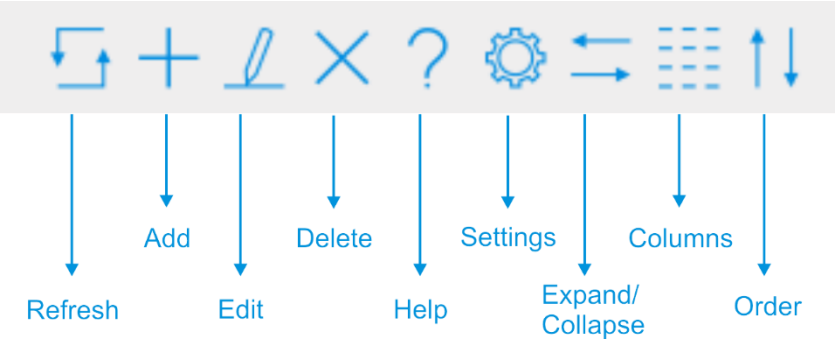
5.2 How to get here?

When you start SimpleProg the first welcoming screen is the Lists Screen with default lists created by SimpleProg using default templates.

5.3 Lists Screen



5.4 Toolbar



List of buttons used in this screen and what they do.

Button	Description
Refresh	Reload data and refresh the screen.
Add	Add a List.

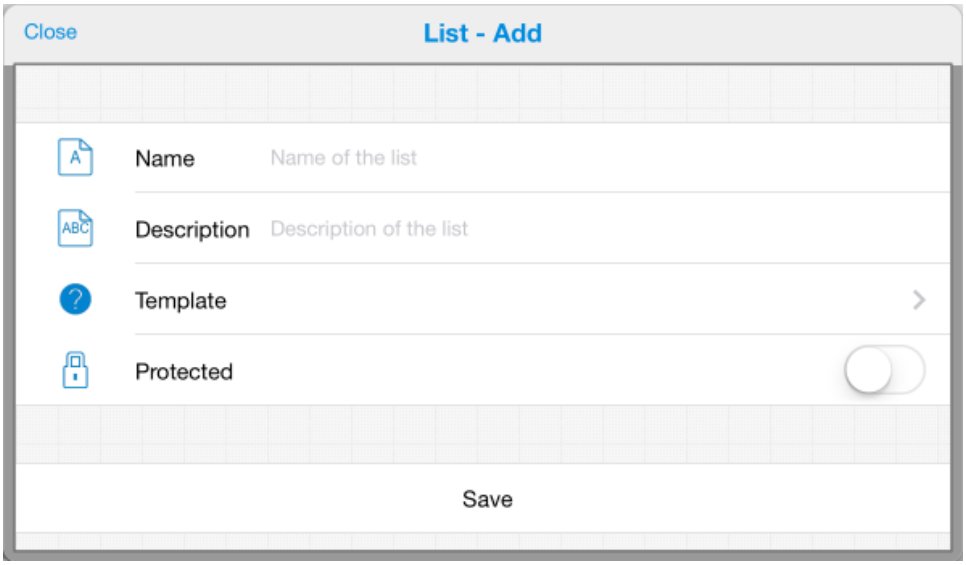
Edit	Edit a List.
Delete	Delete a List.
Help	Display Help.
Settings	Display available Settings for the application.
Expand/Collapse	Switch between Tiles and Table View.
Order	Displays Reordering screen.
Columns	No. of Columns to Display.

5.5 Managing Lists

Adding a List

Adding a new List is similar to the instructions given in section *Adding an Item*.

Add List Screen



Column	Description
Name	Enter the Name of the List.
Description	Enter the Description of the List.
Template	Select the Template to be used for the List from pre-defined Templates. Protected	Enable this if you want to protect the List with password.

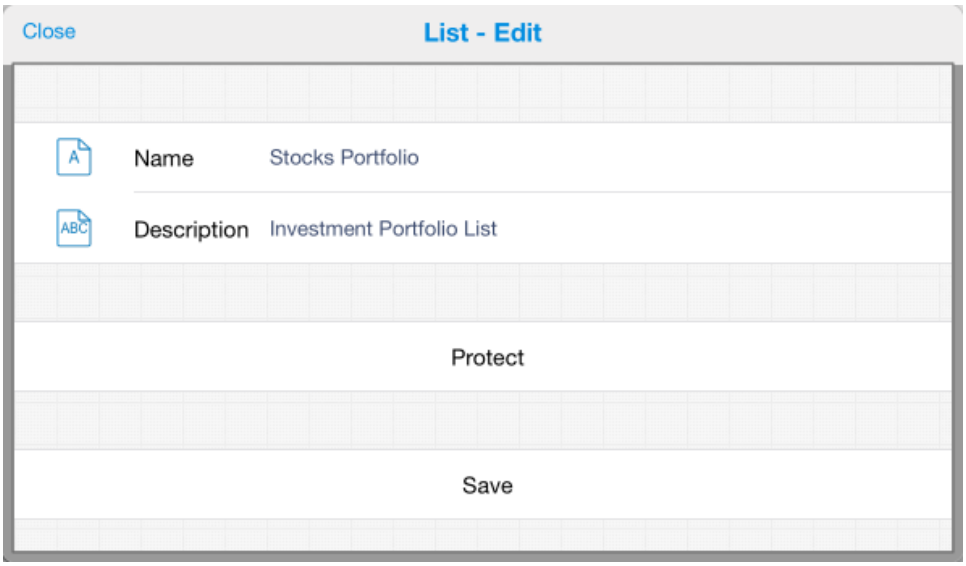
Editing a List

Editing a List is similar to instructions given in section *Editing an Item*.

Edit List Screen



Column	Description
Name	Enter the new Name of the List
Description	Enter the new Description of the List
Template	Select the new Template for the List. The Template can be modified only when there are no entries made in the List.
Protect/Unprotect	Protect: Touch this button to protect the List with password. Unprotect: Touch this button to unprotect the List.

Deleting a list

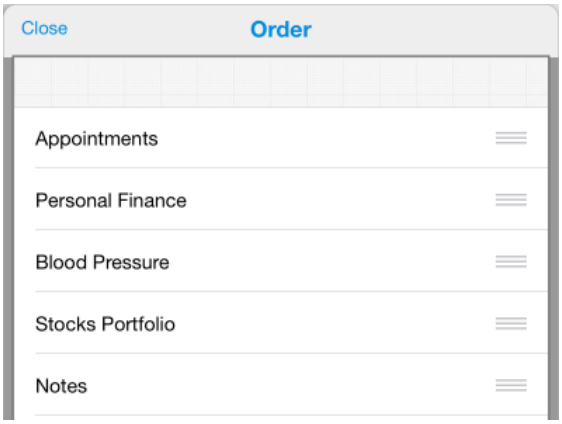
Deleting a List is similar to the instructions given in section *Deleting an Item*.

The List can be deleted only when there are no records in the List.

Reordering List

Reordering the List is similar to the instructions given in section *Reorder an Item*.

Reorder List Screen



6 List Entries

6.1 What are List Entries?

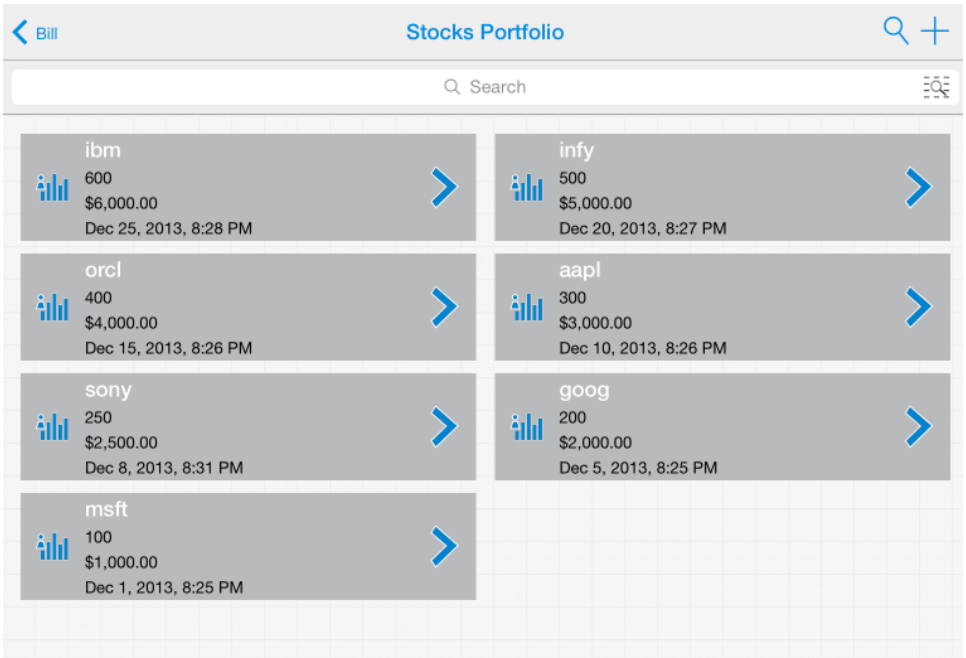
List Entries are the real information that you want to store in the Lists. For example, you can enter the Notes, Birthdays, To Do, and Reminders etc., here.

6.2 How to get here?

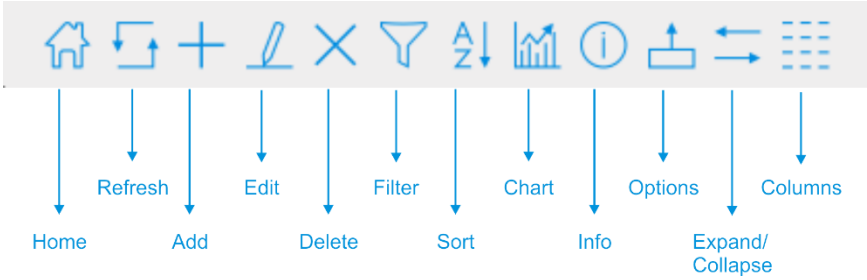
You can activate the List Entry Screen by touching the Arrow button > in the List tiles of Main List Screen as explained in the section *Lists.*

Here is a sample Stock Portfolio List.

6.3 List Entry Screen



6.4 Toolbar



List of buttons used in this screen and what they do.

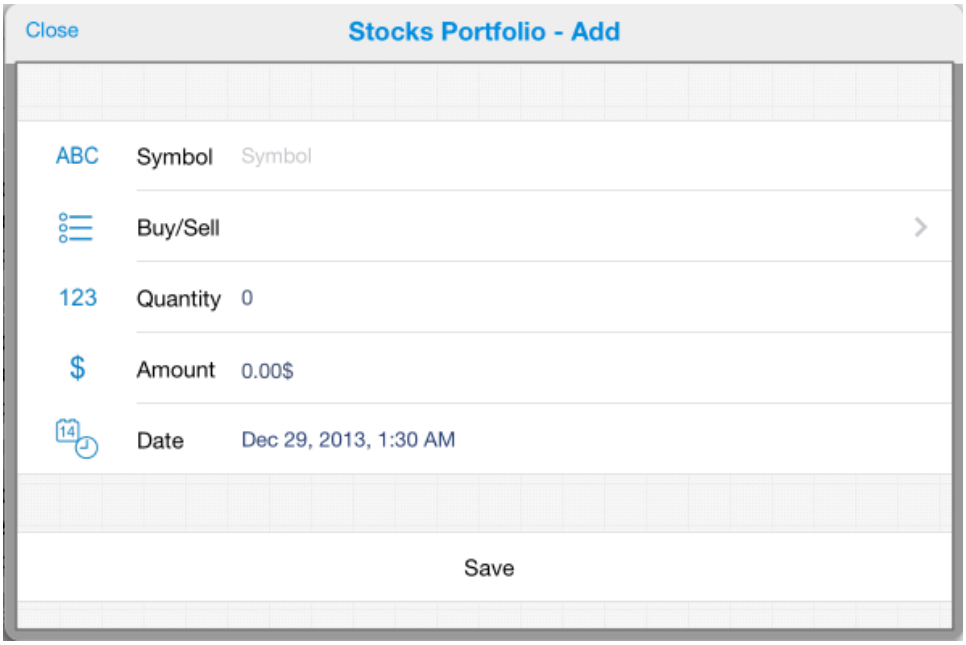
Button	Description
Home	Go to Home screen.
Refresh	Reload data and refresh the screen.
Add	Add a List Entry.
Edit	Edit a List Entry.
Delete	Delete a List Entry.
Filter	Filter the List based on conditions.
Sort	Sort the List with different order of Columns.
Chart	Plot chart using the List Entries.
Info	Display Info screen about List Entry.
Options	Import/Export/ email the List.
Expand/Collapse	Switch between Tiles and Table View.
Columns	No. of Columns to Display.

6.5 Managing List Entries

Adding a List Entry

Adding a new List Entry is similar to the instructions given in section *Adding an Item*.

Add List Entry Screen



Editing a List Entry

Editing a List Entry is similar to the instructions given in in section *Editing an Item*.

Deleting a List Entry

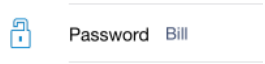
Deleting a List Entry is similar to the instructions given in section *Deleting an Item*.

Show/Hide Protected Fields

If the column type is protected, the column value will not be readable and will be displayed as •••••••. To show/hide the protected field you can do the following.

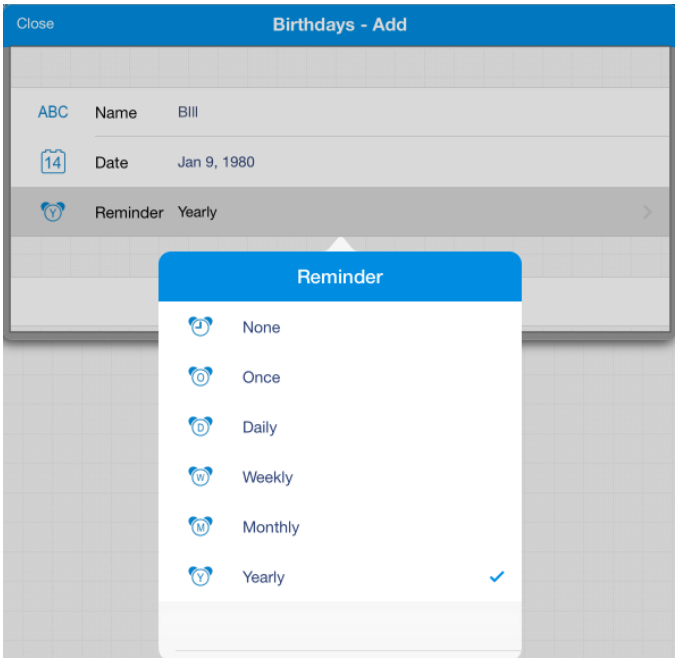
1. Go to Add or Edit List Entry Screen as explained in section *Managing List Entries*.
2. Touch the Lock button to reveal the protected field.

3. Touch the Unlock button to hide the protected field.



Reminders

When Reminder is enabled for a Column in a List, you will have the option to add Once, Daily, Weekly, Monthly or Yearly reminder to that Column. The following Birthday sample entry screen shows the same.



Sorting

If you want to Sort the List by single column, you can do the following.

1. Touch the Expand/Collapse button ⇄ in the bottom toolbar to switch to Table View if it is not in Table View.

2. Touch the Header of the Column that you want to sort. Touch again the Header of the Column to reverse the sorting.

Symbol	Buy/Sell	Quantity	Amount	↑ Date
ibm	Buy	600	$6,000.00	Dec 25, 2013, 8:28 PM
infy	Buy	500	$5,000.00	Dec 20, 2013, 8:27 PM
orcl	Buy	400	$4,000.00	Dec 15, 2013, 8:26 PM
aapl	Buy	300	$3,000.00	Dec 10, 2013, 8:26 PM
sony	Buy	250	$2,500.00	Dec 8, 2013, 8:31 PM
goog	Buy	200	$2,000.00	Dec 5, 2013, 8:25 PM
msft	Buy	100	$1,000.00	Dec 1, 2013, 8:25 PM

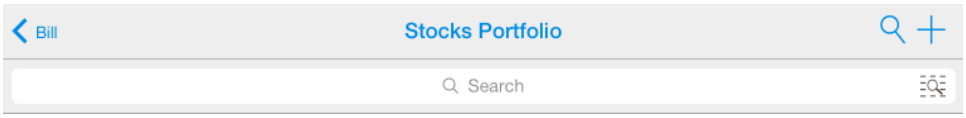
If you want to sort by multiple columns refer to section *Applying Sorts*.

Searching

To search the List, refer to section *Searching*.

If you want to change the columns you want to search, do the following.

1. Touch the Search Columns button in the Search Bar.



6.6 Applying Filter

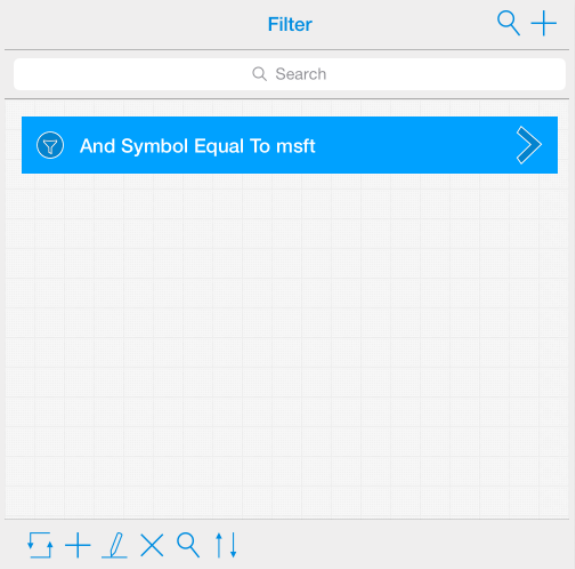
What are Filters?

Filters are set of search conditions that you can apply on the List to filter the rows.

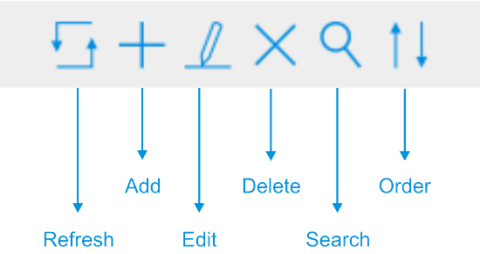
How to get here?

You can activate the Filters Screen by touching the Filter button in the bottom toolbar.

Filters Screen



Toolbar



List of buttons used in this screen and what they do.

Button	Description
Refresh	Reload data and refresh the screen.

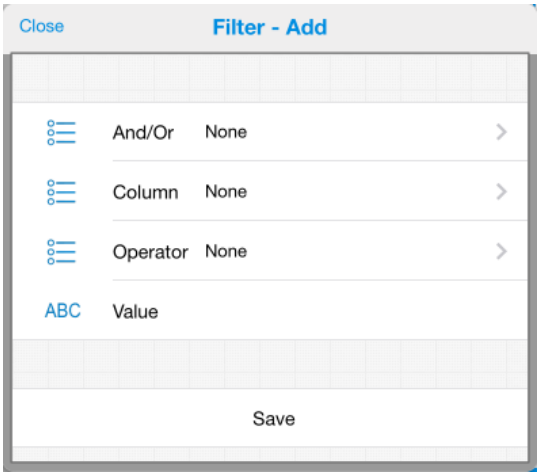
Add	Add Filter
Edit	Edit Filter.
Delete	Delete Filter.
Search	Apply the Filter to the List.
Order	Reorder Filters.

Managing Filters

Adding a Filter

Adding a new Filter is similar to the instruction given in section *Adding an Item*.

Add Filter Screen



Column	Description
And/or	Select And/Or to apply with previous filter.
Column	Select a column that needs a Filter.

Operator	Select one of the operator from the following pre-defined operators. Value	Enter the value of the Column.

Editing a Filter

Editing a Filter is similar to the instruction given in section *Editing an Item*.

Deleting a Filter

Deleting a Filter is similar to the instruction given in section *Deleting an Item*.

6.7 Applying Sorts

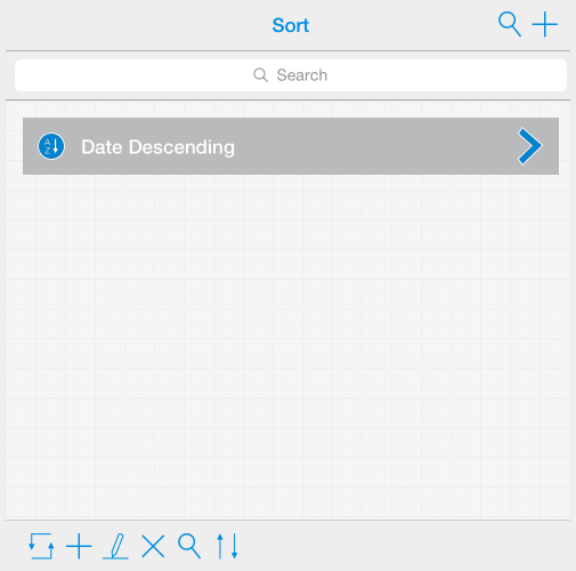
What are Sorts?

Sorts are set of column orders that can be applied to sort the List.

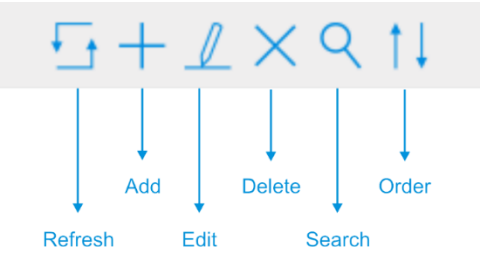
How to get here?

You can activate the Sorts Screen by touching the Sort button in the bottom toolbar.

Sorts Screen



Toolbar



List of buttons used in this screen and what they do.

Button	Description
Refresh	Reload data and refresh the screen.

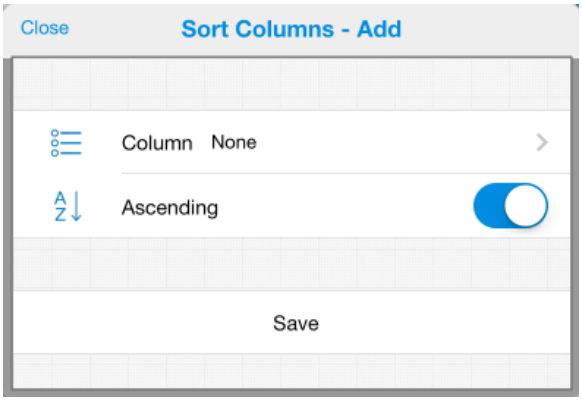
Add	Add Sort.
Edit	Edit Sort.
Delete	Delete Sort.
Search	Apply the Sort to List.
Order	Reorder Sorts.

Managing Sorts

Adding a Sort

Adding a new Sort is similar to the instruction given in section *Adding an Item*.

Add Sort Screen



Column	Description
Column	Select a column that needs a sort to be applied.
Ascending	Sort the column in ascending or in descending order

Editing a Sort

Editing a Sort is similar to the instruction given in section *Editing an Item*.

Deleting a Sort

Deleting a Sort is similar to the instruction given in section *Deleting an Item*.

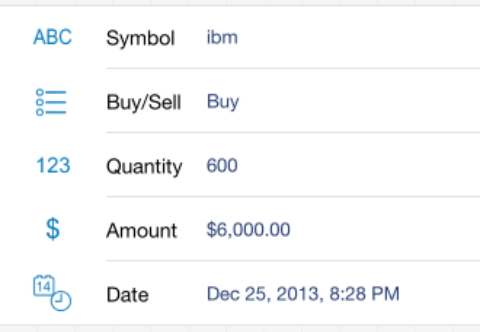
6.8 List Entry Info

List Entry information displays the current List Entry detail for viewing.

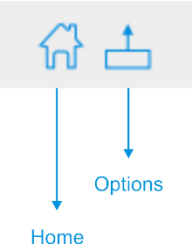
How to get here?

You can activate the List Entry Info Screen by touching the Info button ⓘ at the bottom toolbar.

List Entry Info Screen



Toolbar



Button	Description
Home	Go to Home screen.
Options	Export/Mail the entry as CSV, Excel and PDF.

Export/Mail

You can export/mail the List Entry as CSV, Excel and PDF file by doing the following.

1. Touch the Options button in the bottom toolbar and follow the information given in section *Export/Mail*.

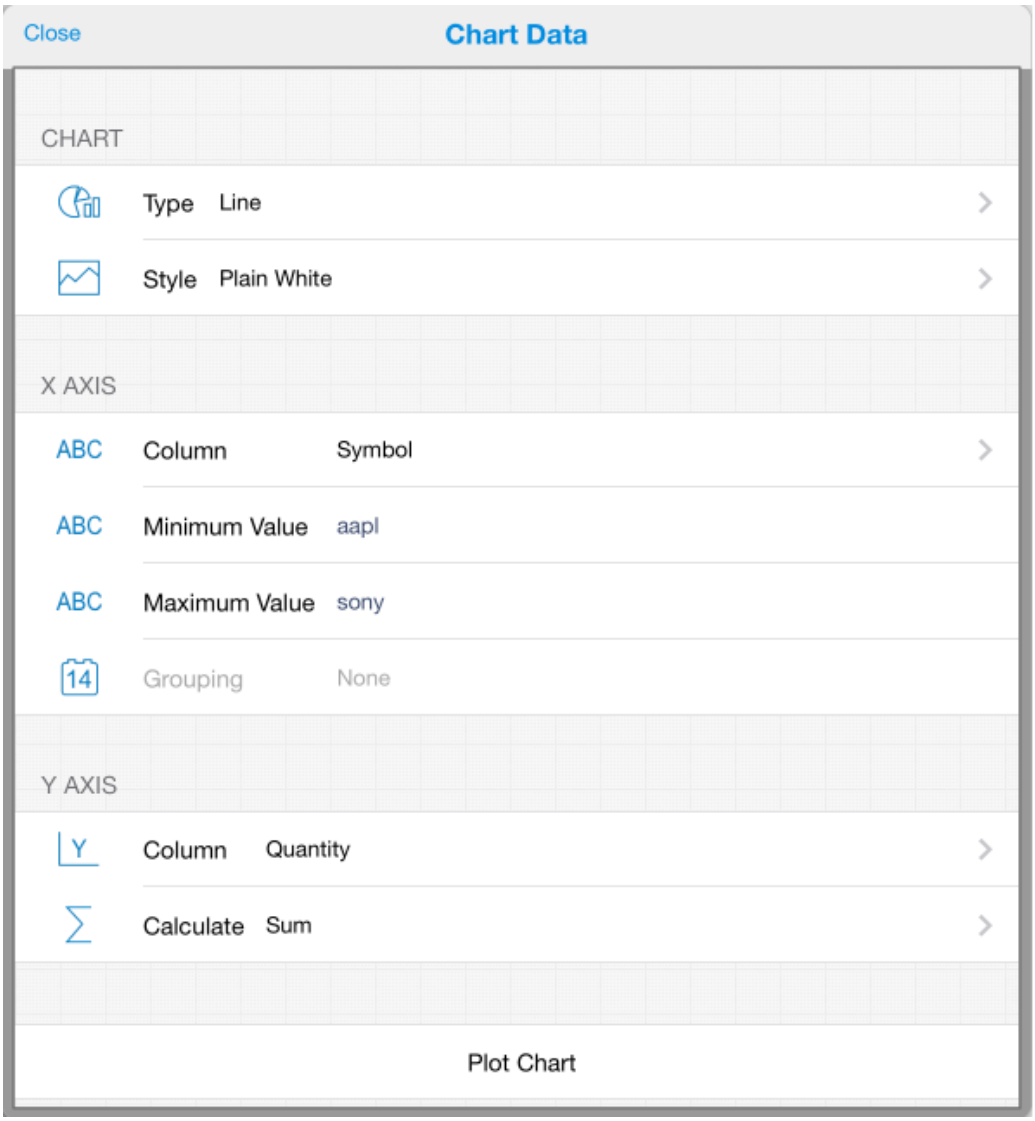
6.9 Plotting Charts

In SimpleProg, you can plot charts using the information entered in the lists.

How to get here?

You can activate the Chart Data Screen by touching Chart button in the bottom toolbar.

Chart Data Screen



Column	Description
Type	Select the Type of the Chart to be drawn. 
Style	Select the Style to be used for drawing the Chart. XAXIS	
Column	Select the column that has to be used for x Axis.
Minimum Value	Enter the Starting value that has to be used for x Axis.
Maximum Value	Enter the Ending value that has to be used for y Axis.
Grouping	Select the x Axis Grouping that has to be used for Calculate y Axis values. Y AXIS	
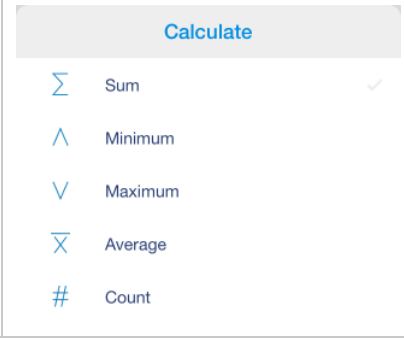
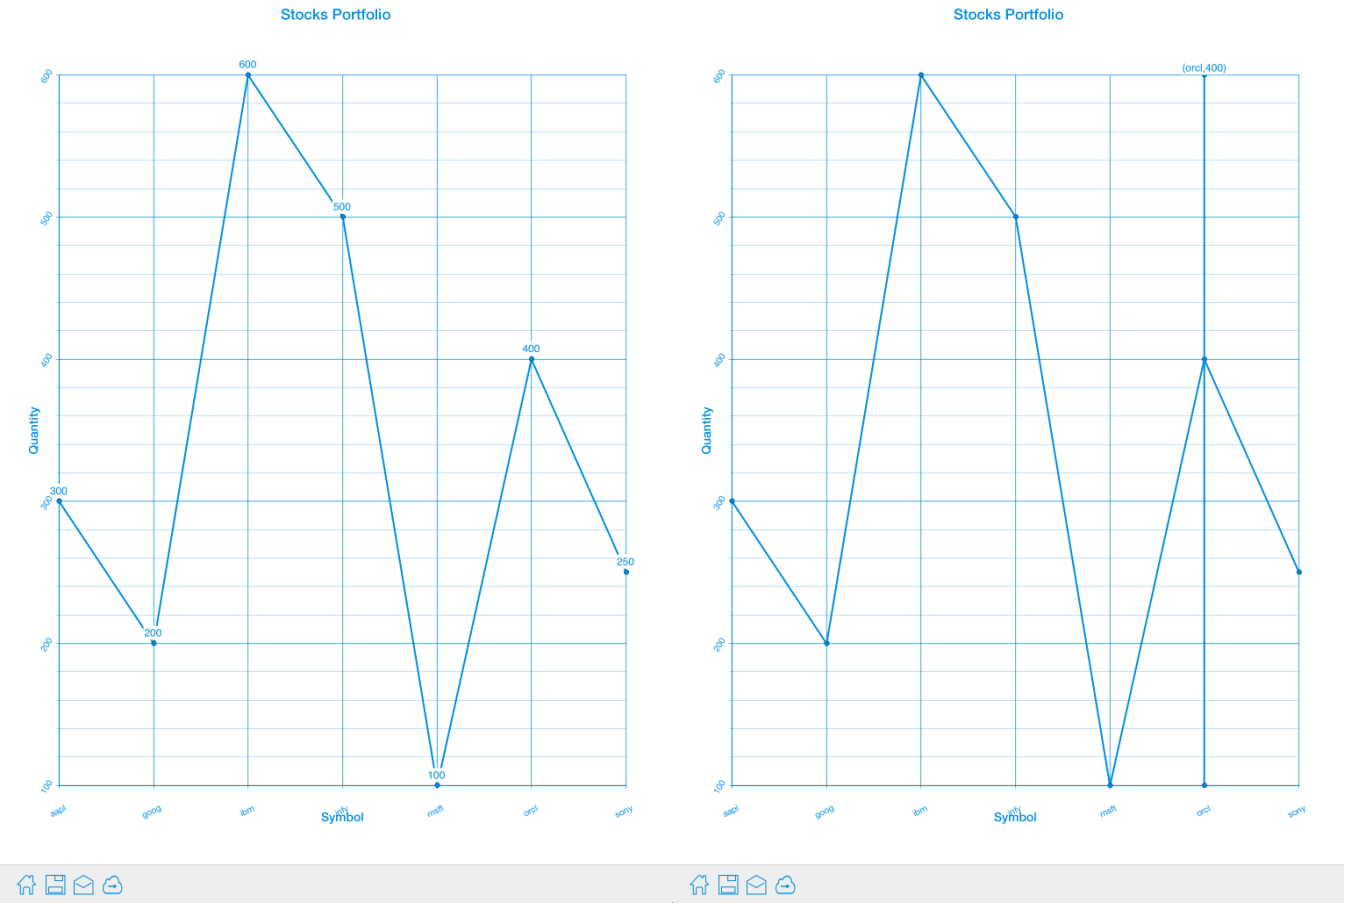
Column	Select the column that has to be used for y Axis
Calculate	Select how to calculate the y Axis value if the x Axis has got multiple y values.



Drawing Charts

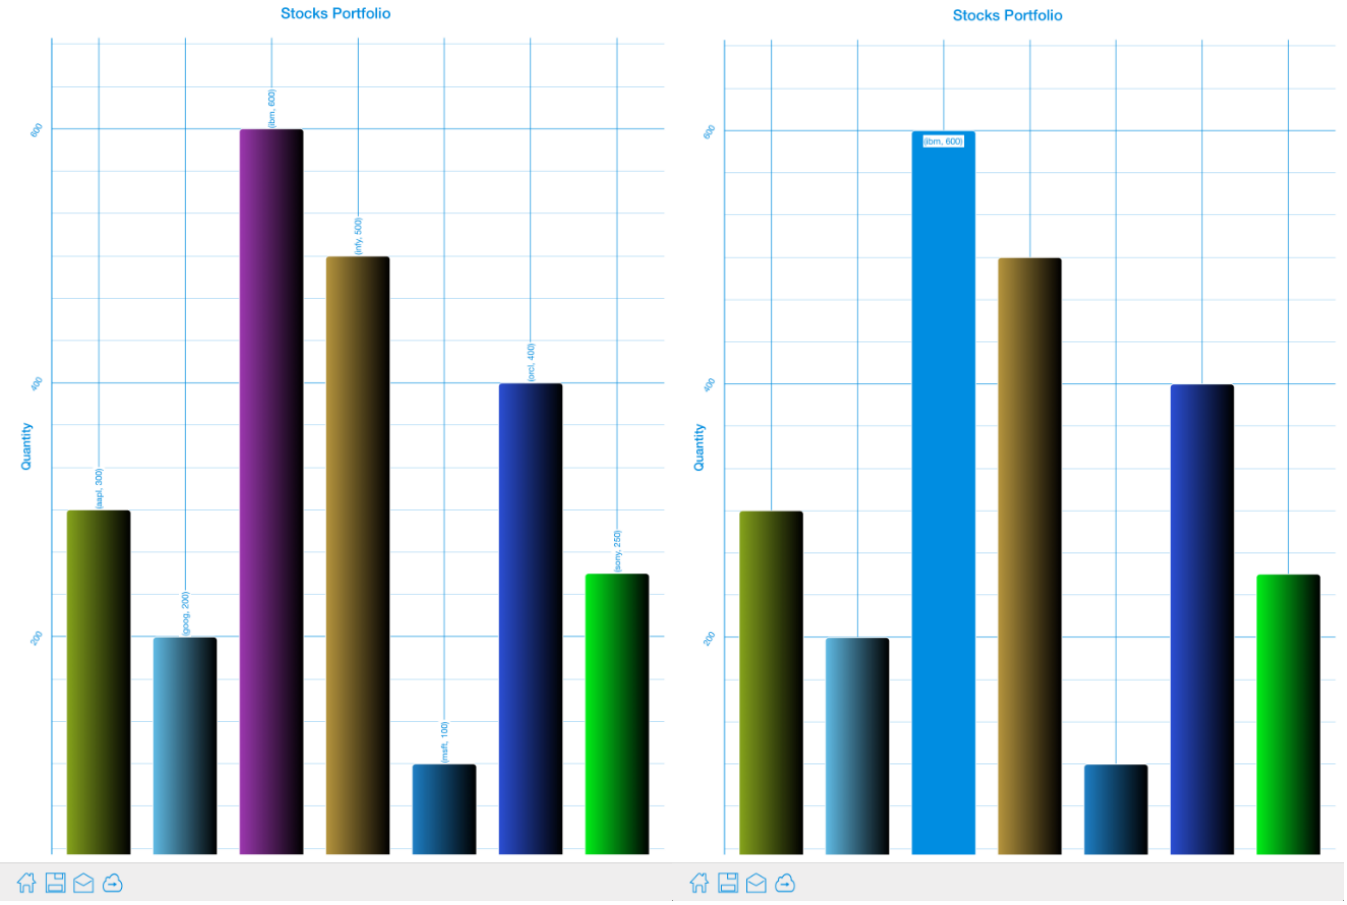
Once you have completed entering the chart data, touch the Plot Chart button to draw the chart. You can find sample charts drawn by SimpleProg below.

Line Chart



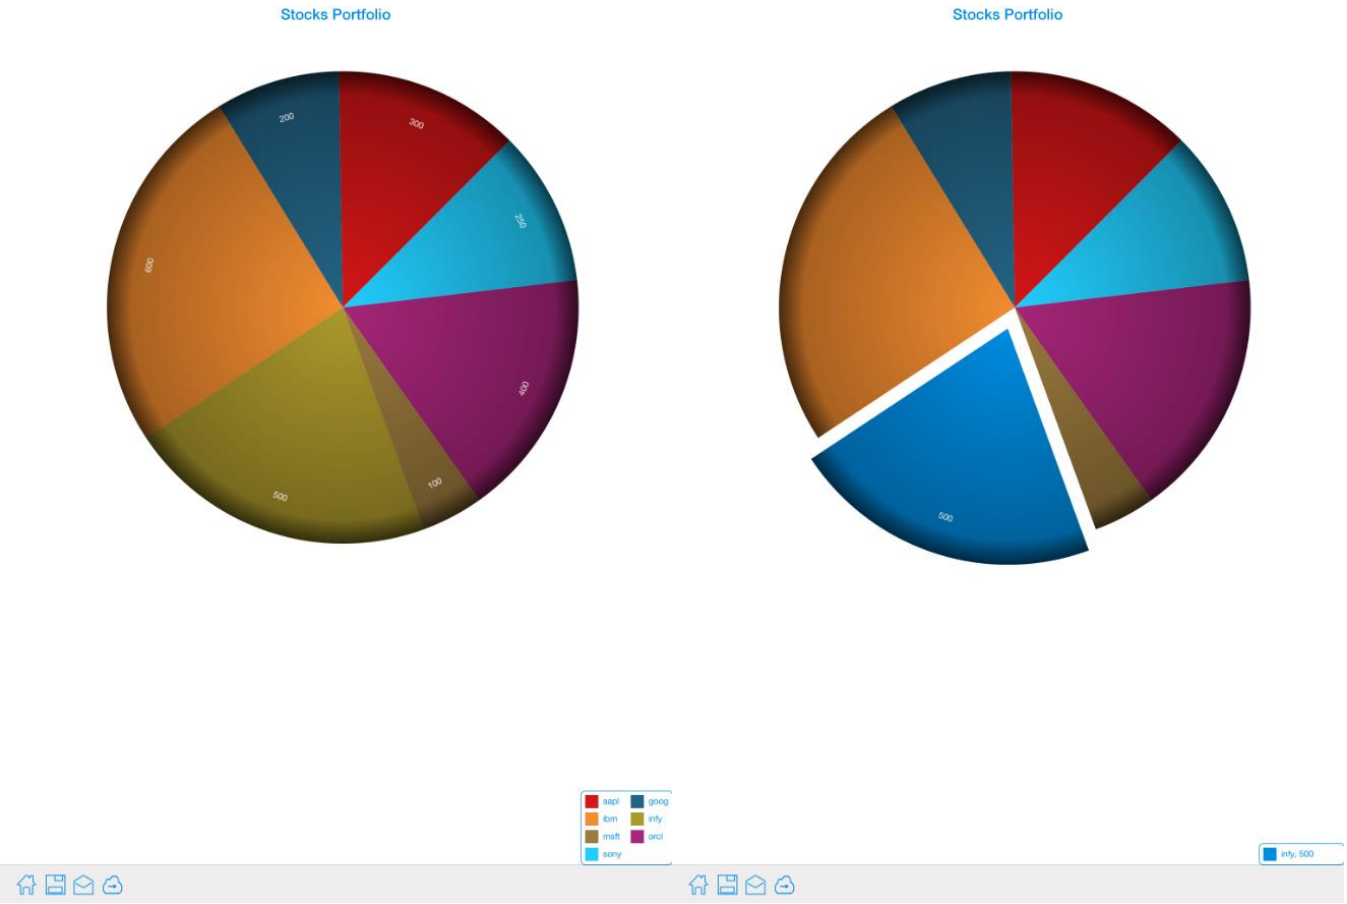
Touch the chart area to display a vertical selection line which you can move horizontally to navigate the coordinates.

Bar Chart



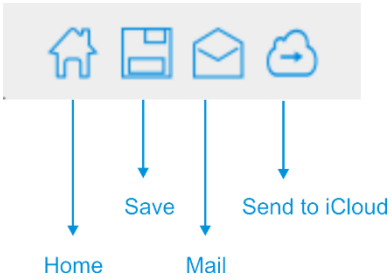
Touch any of the bars to select and it will display bar values at the top of the bar hiding all other bar values.

Pie Chart



Touch the pies to pop out the slice with its current values hiding all other pie values.

Toolbar



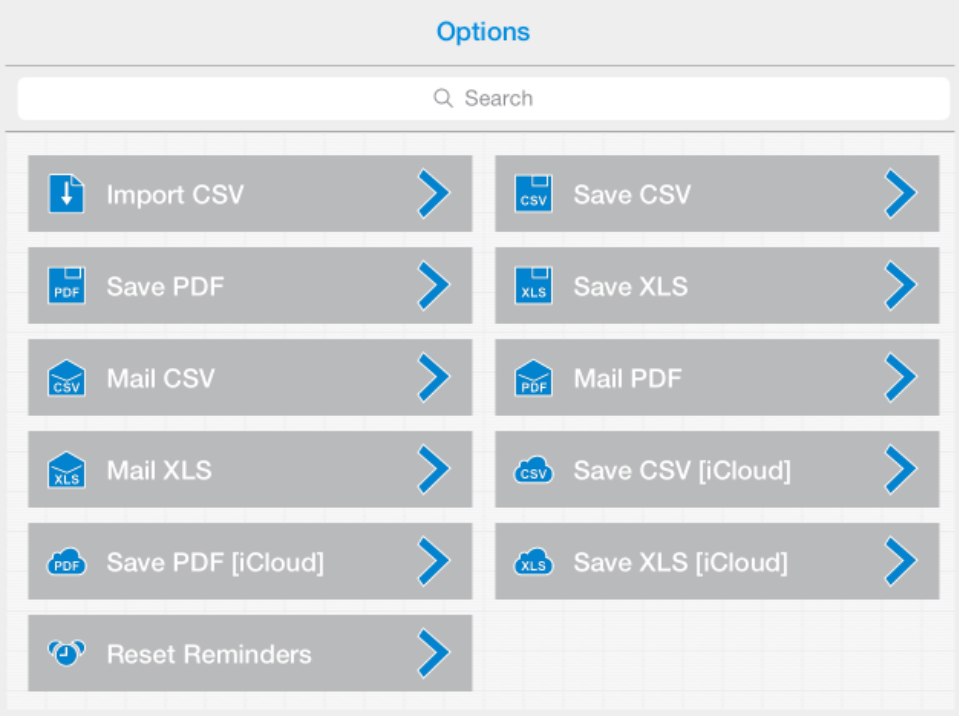
List of buttons used in this screen and what they do.

Button	Description
Home	Go to Previous screen.
Save	Save the Chart to Documents folder.
Mail	Email the Chart.
Save to iCloud	Save the Chart to iCloud Documents folder.

Options

SimpleProg allows you to export and email the List as CSV, Excel and PDF file. You can also import CSV file to Lists. To achieve, this you can do the following.

1. Touch the Options button in the bottom toolbar to get the following screen.



2. Export and Mail is explained in section *Export/Mail.*

Import CSV File

SimpleProg allows you to import CSV files to Lists. To know the structure of the CSV file for a List, Export the List to CSV file and use the file as a sample CSV file. Please note the date format for import should be “yyyy-MM-dd HH:mm:ss ZZZ”.

Reset Reminders

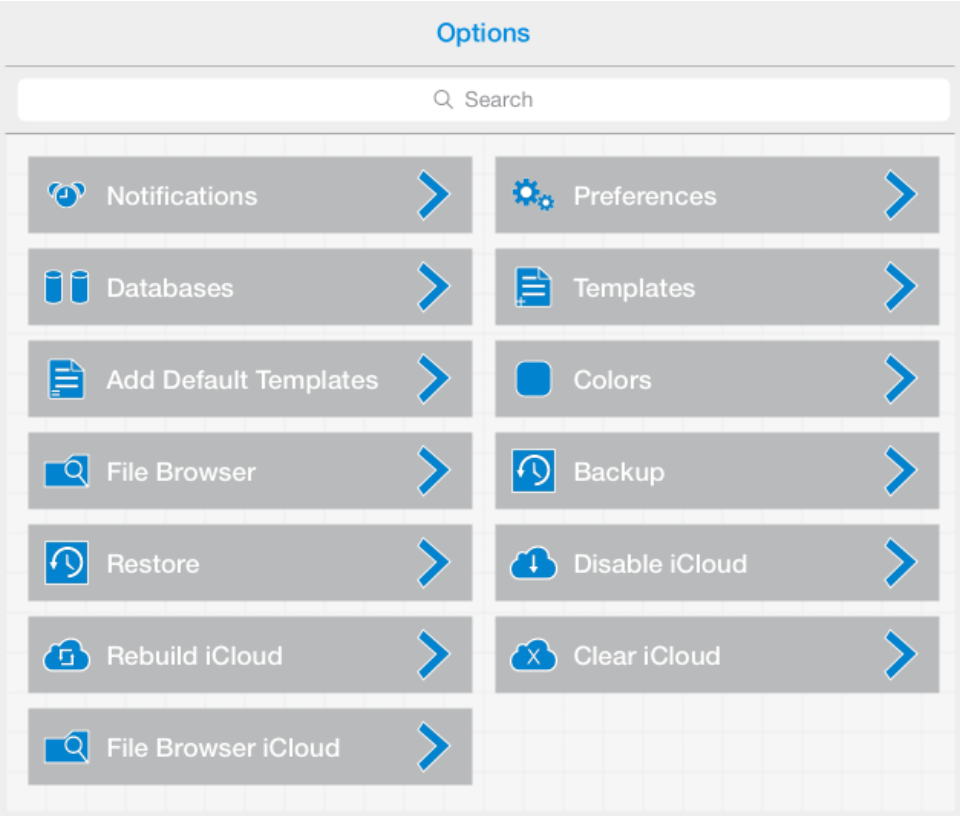
Selecting this option will reset and recalculate the reminders that you entered in the List.

7 Settings

7.1 How to get here?

You can activate the Settings Screen by touching Settings button in the bottom toolbar.

7.2 Settings Screen



Option	Description
Notification	This will introduce you to a new screen with list of upcoming Notifications/Reminders.

Preferences	This will introduce you to a new screen with list of settings available in SimpleProg.
Databases	This will introduce you to Databases screen where you can select/manage Databases/Profiles.
Templates	This will introduce you to Templates screen where you can manage the templates used in the lists.
Add Default Templates	This will add the default templates to the current lists.
Colors	This will introduce you to Colors screen where you can manage colors.
File Browser	This will introduce you to File Browser screen where you can view/manage files in the Documents folder of SimpleProg.
Backup	This will allow you to Backup the current data state to zip file.
Restore	This will allow you to Restore the data to previous state from Zip file.
Enable / Disable iCloud	This will allow you to Enable/Disable iCloud Sync for the information stored.
Rebuild iCloud	This will allow you the rebuild the local data store with iCloud data store.
Clear iCloud	This will reset and clear the iCloud data.

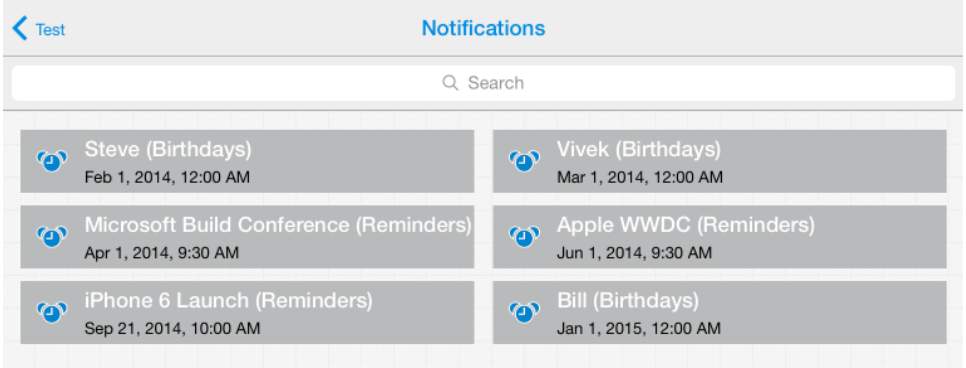
File Browser iCloud	This will introduce you to new File Browser screen where you can view/manage files in iCloud Documents folder of SimpleProg.

The following section explains you about the individual options.

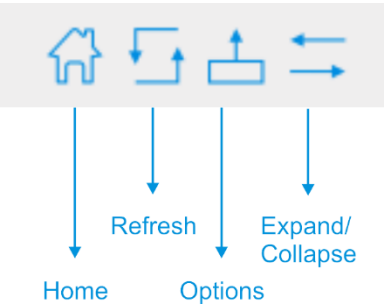
7.3 Notifications

Touching this option will allow you to view the upcoming Notification/Reminders. This is the summary of reminders that you have created in the List. This option consolidates all Notifications/Reminders and display them in one list for you to review the same easily.

Notifications Screen



Toolbar



List of buttons used in this screen and what they do.

Button	Description
Home	Go to Home screen.
Refresh	Reload data and refresh the screen.
Options	Export/Email the reminders as CSV, Excel and PDF file.
Expand/Collapse	Switch between Tiles and Table View.

Sync Reminders

When iCloud is enabled, Reminders will not be in sync automatically across your devices. To get the reminders in sync, you can do the following.

1. Touch the Refresh button in the bottom toolbar to reset and recalculate the Reminders in the unprotected Lists.
2. Refer to section *Reset Reminders* in *List Entries* for resetting the Reminders in protected Lists.

3. Refer to Auto Sync Reminders in section *Preferences* to enable Automatic reset and recalculation of Reminders.

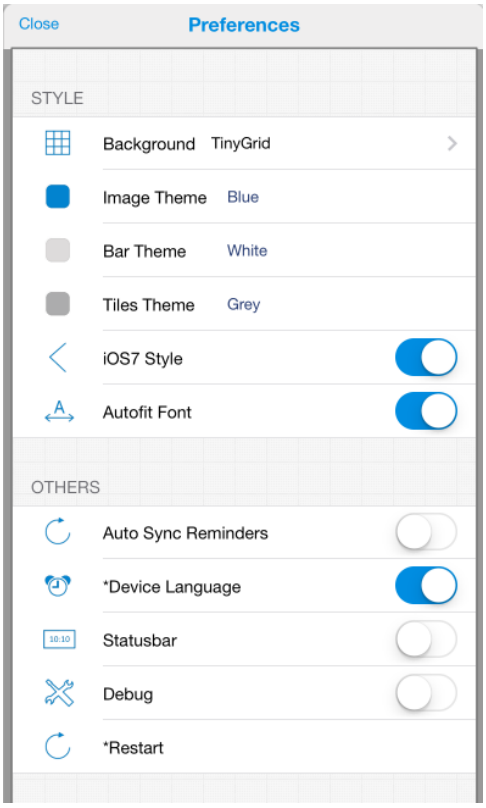
Options

You can export/mail the list as CSV, Excel and PDF file by touching the Options Button in the bottom toolbar. For more information refer the section *Export/Mail*.

7.4 Preferences

With this option, you can change the general application wide settings like theme, status bar and enable debug option to opt for support.

Preferences Screen



Column	Description
Background	Select a Background that can be applied to all screens.
Image Theme	Select an Image tint color from color database that can be used in tiles and other places.
Bar Theme	Select a Bar tint color from color database that can used in top and bottom bars.
Tiles Theme	Select a Background color from color database that can be used as Tiles Background color.
iOS7 Style	When enabled, buttons will be displayed without borders. When disabled, button will be displayed with borders.
Auto fit Font	When enabled, the font size will be automatically adjusted to the size of the text displayed in the tiles.
Auto Sync Reminders	When you enable iCloud, Reminders will not be synced automatically across devices. When enabled SimpleProg will automatically reset and recalculate the Reminders in the unprotected Lists on every start. Refer to section

	Sync Reminders in *Notifications* for manually starting this Auto Sync Reminder process. Refer to section *Reset Reminders* in *List Entries* for resetting the Reminders in protected Lists.
Device Language	When enabled SimpleProg will use the language of the device. When disabled SimpleProg will use English as language.
Status Bar	Show/Hide Status bar.
Debug	When enabled SimpleProg will collect debug information while running and later you can send them to MakeProg for support in case if you have trouble using SimpleProg.
Defaults	Reset the settings to initial state.

7.5 Databases

Refer to section *Databases* for more information.

7.6 Templates

Refer to section *Templates* for more information.

7.7 Add Default Templates

When this option is selected, SimpleProg defined default templates will be added to current lists automatically in the selected database. If Lists already

exist, any changes made in the default templates will be applied to the existing lists.

7.8 Colors

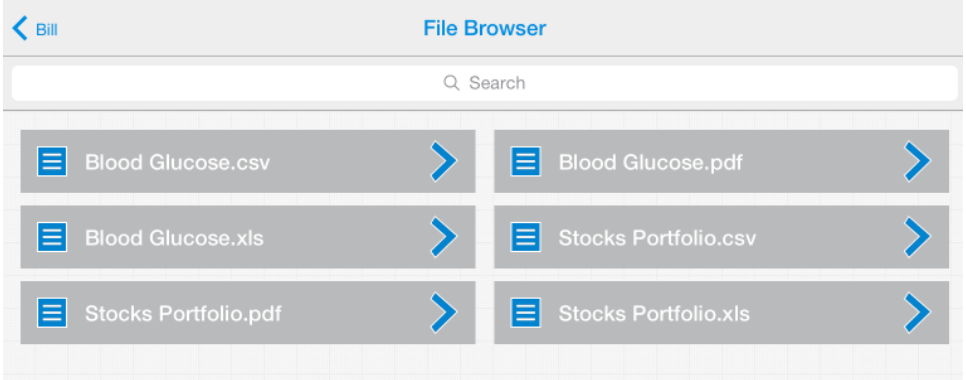
Refer to section *Colors* for more information.

7.9 File Browser

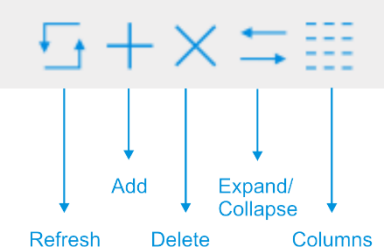
When you select this option you can browse/manage/view the files in SimpleProg Documents folder.

To preview the file, touch the Arrow button > in the tiles.

File Browser Screen



Toolbar



List of buttons used in this screen and what they do.

Button	Description
Refresh	Reload data and refresh the screen.
Add	Create folder.
Delete	Delete file or folder.
Expand/Collapse	Switch between Tiles and Table View.
Columns	No. of Columns to Display.

7.10 Backup

With this option, you can back up the existing database as a zip file to SimpleProg Documents folder and can transfer to some other location using iTunes or by emailing.

7.11 Restore

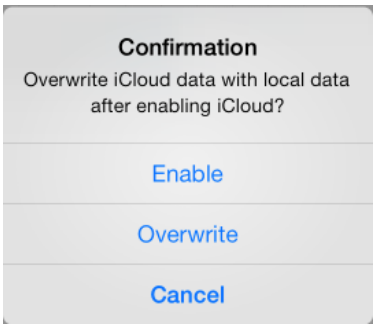
With this option, you can restore the database from previously backed up zip file. Please note that the backup file should be transferred to SimpleProg Documents folder prior to restoring. You can use any one of the following methods to transfer the file to SimpleProg Documents folder.

1. You can put the backup zip file in SimpleProg Documents folder using iTunes.

2. If you have the backup zip file in the mail, long press the attachment and in the open with dialog select SimpleProg. This will save the Backup Zip file in the SimpleProg Documents folder.

7.12 Enable iCloud

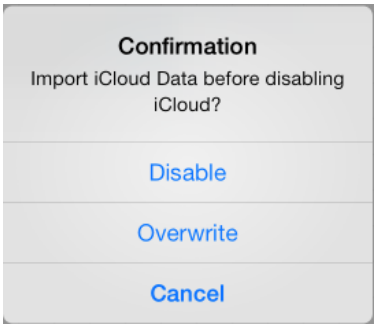
SimpleProg can get the data sync across devices using iCloud. When you touch this option, you will be prompted with a following dialog.



Option	Description
Enable	This will enable SimpleProg to store data in iCloud. If you are enabling this for the first time, the data stored in the local database will be copied to iCloud. If you are doing it for the second time in the same device or different device SimpleProg will start using the iCloud data.
Overwrite	This will overwrite the iCloud data with local data. Hence please use it with caution.
Cancel	Nothing happens.

7.13 Disable iCloud

With this option, you can disable iCloud sync for the devices. When you select this option, you will be presented with a dialog.



Option	Description
Disable	This will disable SimpleProg from storing data in iCloud but It will not delete the data from iCloud. If you need to delete the SimpleProg data from iCloud use iCloud Settings in the iOS Device.
Overwrite	This will disable SimpleProg from storing data in iCloud and will update the local database from iCloud Data.
Cancel	Nothing happens.

7.14 Clear iCloud

When you select this option, iCloud data will be reset to initial state. Please use this option with caution.

7.15 Rebuild iCloud

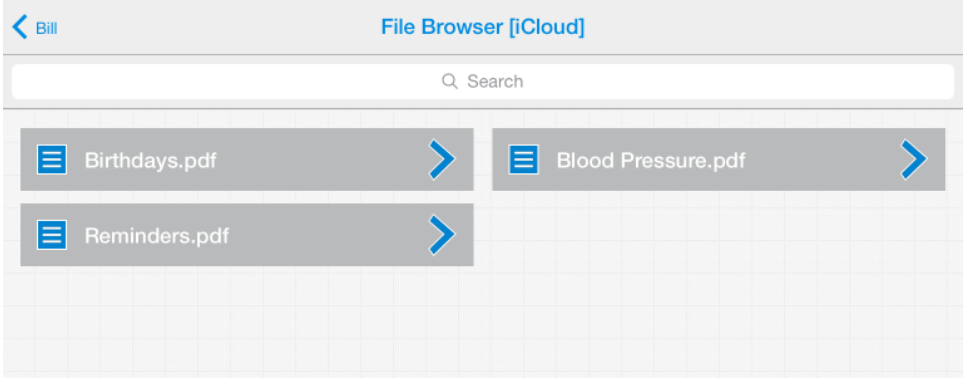
When you select this option, the local database will be rebuilt with iCloud data. If you have any issue in iCloud sync, you can use this option to reseed the local database from iCloud database.

7.16 File Browser iCloud

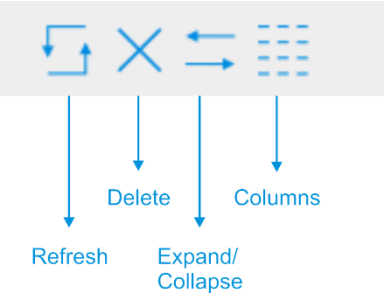
When you select this option, you can browse/manage/view files stored in SimpleProg iCloud Documents folder.

To preview the file, touch the Arrow button > in the tiles.

File Browser iCloud Screen



Toolbar



List of buttons used in this screen and what they do.

Button	Description
Refresh	Reload data and refresh the screen.
Delete	Delete file.
Expand/Collapse	Switch between Tiles and Table View.
Columns	No. of Columns to Display.

8 Templates

8.1 What are Templates?

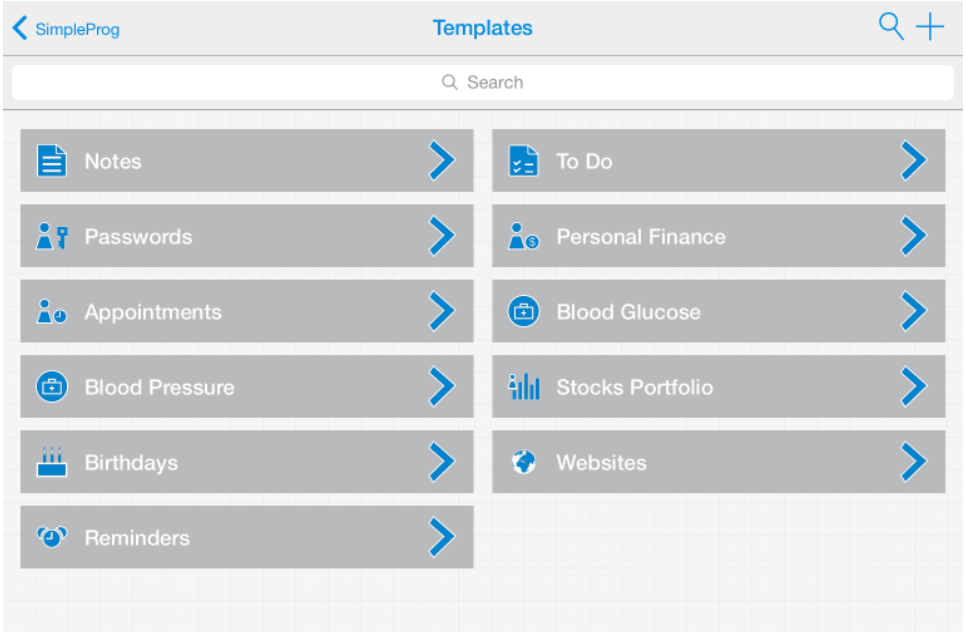
Templates are table definition that will be used by Lists in the Main screen. Notes, To Do, Stock Portfolio and Birthdays etc., are the kinds of templates with their own set of Columns. For example, Birthday Template may have columns named Person Name and Birth Date. You can define your own Template and Template Columns in this screen.

8.2 How to get here?

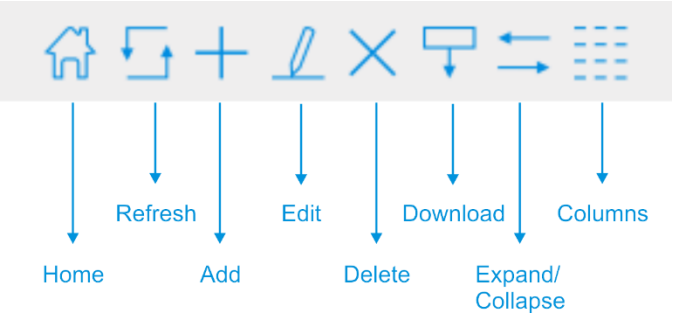
You can activate the Templates Screen by doing the following.

1. Touch the Settings button in the bottom toolbar of Main Entry screen.
2. Select the option Templates by touching the Arrow button in the tile.

8.3 Templates Screen



8.4 Toolbar



List of buttons used in this screen and what they do.

Button	Description
Home	Go to Home screen.
Refresh	Reload data and refresh the screen.
Add	Add a Template.

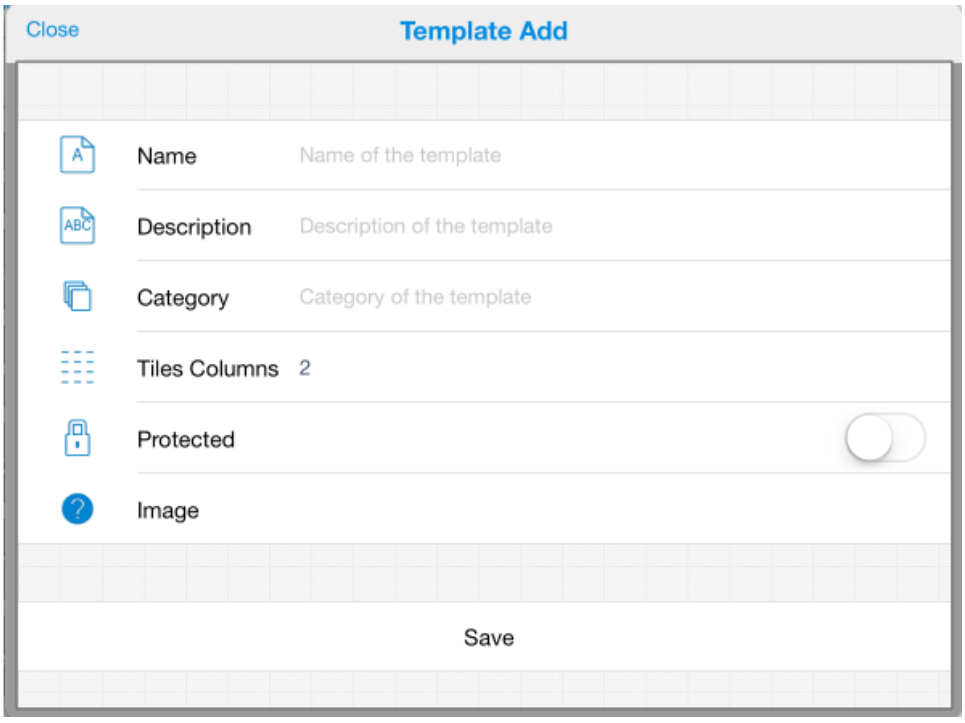
Edit	Edit a Template.
Delete	Delete a Template.
Download	Download Templates from Web.
Expand/Collapse	Switch between Tiles and Table View.
Columns	No. of Columns to Display.

8.5 Managing Templates

Adding a Template

Adding a new Template is similar to the instructions given in section *Adding an Item*.

Add Template Screen



Column	Description
Name	Enter the Name of the Template.
Description	Enter the Description of the Template.
Category	Enter the Category of the Template.
Tiles Columns	Enter No. of Columns to be displayed in Tiles View.
Protected	Enter whether the Template has to be protected with the password.
Image	Select the Image of the Template that will be displayed in Tiles.

Editing a Template

Editing a Template is similar to the instructions given in section *Editing an Item*.

Deleting a Template

Deleting a Template is similar to the instructions given in section *Deleting an Item*.

The Template can be deleted only when there are no Lists using the template.

9 Template Columns

9.1 What are Template Columns?

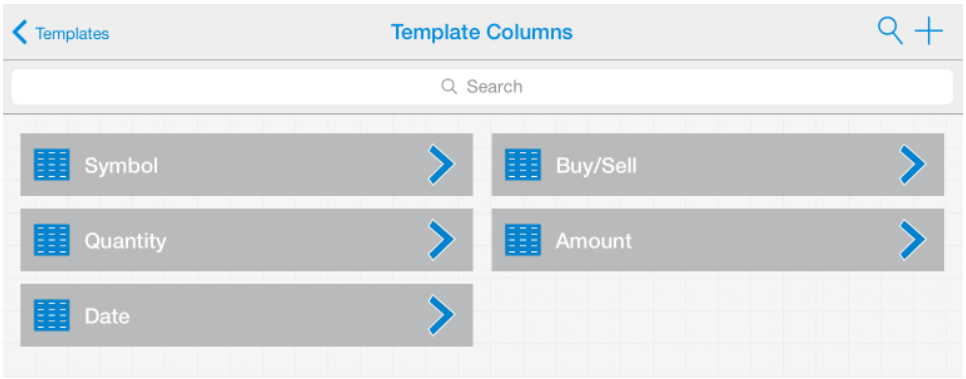
Template Columns define the structure of List in Columns. A Template can have multiple columns of different type (text, numeric, date etc.,). For example, Birthdays Template may have Person Name and Birth Date Template Columns.

9.2 How to get here?

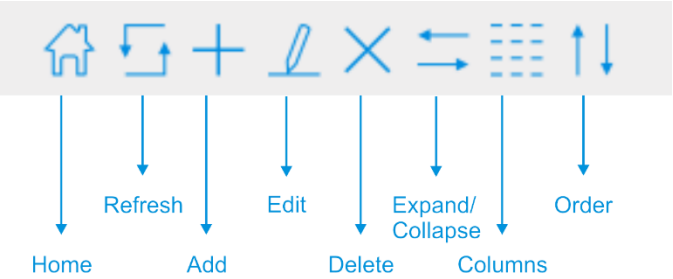
You can activate the Template Columns Screen by doing the following.

1. Touch the Settings button in the bottom toolbar of Main Entry screen.
2. Select the option Templates by touching the Arrow button in the tile.
3. In Templates Screen, Highlight the Template and touch the Arrow button in the tile.

9.3 Template Columns Screen



9.4 Toolbar



List of buttons used in this screen and what they do.
